Abstract

The aim of this study was to know the ego strength among Palestinian women, and the effects of some variables on ego strength.

The descriptive analytical method was used in this study. The sample of this study consisted of (450) female. The two researchers used scale of (9) dimensions. The results of the study indicated that there were significant differences in ego strength due to social role, education, social status. In the same time there were no significant differences in ego strength due to the place of living.
