Phrase-Finder Index

This is an index of the words found in the dictionary entries. It helps you find the entry you are seeking by showing you what to look up in the dictionary.

HINTS

1. The index deals only with word **FORM** and not with word **MEANING**. Each word on the left tells you what phrase to look up.
2. The word on the left can be found in the phrase on the right. That means you can locate a phrase even if you can only remember or identify a word or two.
3. Identical words on the left may not even share the same meaning. That is not a problem since they are only used for indexing purposes. Meaning is found in the dictionary entries.
4. The words on the left are usually the simplest and most basic form of the words you are looking up, that is, present tense verbs and singular nouns.
5. Look up a major word in the idiom, preferably a verb, and go to the dictionary **entry head** listed in the right-hand column. If that fails, try an adverb, preposition, or other word.

TO THE LEARNER

Use the index to figure out what the boundaries of the target phrase are and to find out how the phrase is listed in the dictionary section. The index allows you to extract the core of the idiomatic expression so you can look up the core of the phrase in the dictionary section.

For example, you hear the sentence “He’s always throwing his weight around.” and don’t understand it. There is no easy way for you to tell how the problematic part of this sentence is listed in this or any other dictionary. Using this index, if you start by looking up the **VERB** in the sentence, you will find **throw one’s weight around**, and this is how the form is listed in the dictionary. Simply look up **throw one’s weight around** in the dictionary.

You can also find the same phrase by looking up the words *weight* or *around* since these words are part of the core of the expression. The expression will not be found under *He* or *always* since these two words are not part of the core. Note that you also can learn what the actual core of the idiom is, so you will be able to use it yourself at a later time.

As you try to find the dictionary entry by using the index, you should first look up the **VERB**, then an **ADVERB** or **PREPOSITION**, then a **NOUN** or **PRONOUN**. While there are many nouns and pronouns in the index, most of the nouns and pronouns contained in real-life idioms and phrasal verbs are variables. They belong to *groups* of potential nouns or pronouns that are represented by **so** (someone), **sth** (something), or **so/sth** (someone or something) in this dictionary.

If you are trying to understand “He frequently noises his problems about.”, you should first look up *noise*, and you would find **noise sth about**, which is the form of the idiom listed in this dictionary. The noun, *problem*, is the variable part of the idiom: **noise sth about**.

When you are writing, use the index to find out the correct form of phrasal verbs and prepositional verbs. The variables show where a noun, pronoun, or other form is required, but not exactly which word to use.

TO THE TEACHER

The index provides important lists of the prepositions and adverbs used in phrasal and prepositional verbs. These can be used in lesson preparation. It also provides the quickest way to locate the core form of the idiomatic expressions containing a specific word. The index can be used in making supplementary vocabulary lists that include the phrases that use the words on the lists. Students should be encouraged to consult the index to verify the correct form of phrasal verbs, prepositional verbs, and phrasal-prepositional verbs.
